

CLAIMS

1. Extendable glass-holder for seat, particularly for seat of economy class in an aircraft, characterized in that said glass-holder is housed within the seat armrest, and is extendable from the same, an extension mechanism of the glass-holder from the same armrest being provided, said glass-holder being comprised of a rigid arm, longitudinally movable with respect to the armrest, in such a way to be able to take a retracted position and an extended use position, and of a movable arm, or finger, pivoted on said rigid arm, in such a way to take a closed position when said glass-holder is in the retracted position within the armrest, and an open position, when said glass-holder is in the extended position, said rigid and movable arms having, in the use configuration, a shape such to allow to support the glass.

2. Extendable glass-holder for seat according to claim 1, characterized in that said extension mechanism provides a thrusting element for the extension of the rigid arm of the glass-holder.

3. Extendable glass-holder for seat according to claim 1, characterized in that said rigid arm has an inner shaped part to conform with the shape of the glass to be supported.

4. Extendable glass-holder for seat according to claim 1, characterized in that said movable arm, or finger, has a curved shape, corresponding to the outer shape of the glass.

5. Extendable glass-holder for seat according to claim 1, characterized in that a glass-holder protection door is provided on said armrest, at the front of the glass-holder.
